

# PROBLEM STATEMENT

Albert Einstein said, "Knowledge doesn't become persistent unless and until you evaluate yourself". Which means learning is not done only by listening to teacher and making notes, it comes after you evaluate yourself in that particular concept.

For evaluating yourself, best way is to go through the **Test**. Now a days test is being conducted on paper which is very tedious task because:

- You have to write questions with their options on any editor (**Takes time**).
- Then take print out of those papers for each student that is going to give the test (**Costly**).
- Distribute papers to each student (**Again Time taking**).
- Students could cheat easily (**Less secure**).
- Inside the examination room, at least one staff has to be there (**Man power**).
- Sometimes test paper of student could damage due to any unfortunate situation (**Unreliable**).
- You have to collect each paper from each student (**Takes time**).
- You'll go and check the MCQ's and probably provide the result next day (**Time consuming**).

Above all are some problems with paper test.

That's why we've decided to make the software where these problems can be overcome.
